

Protective Windows for High Power Lasers

Protective windows are mostly used for optics protection in laser heads of high power lasers for applications like welding and cutting. We polish and coat protective windows for most kinds of solid state, fiber, and diode lasers in the near infrared wavelength range (usually from 700nm up to 1,200nm). Below in the table we present our standard protective windows with antireflection coating.

size, mm	price USD/pc 1-20 pcs	size, mm	price USD/pc 1-20 pcs	size, mm	price USD/pc 1-20 pcs
dia 12.50 x 1.20	10.50	dia 32.00 x 6.35	22.40	dia 42.00 x 9.00	40.20
